

Rule Book

Game Overview

In Robbery Rush, player's form a **Crew** and prepare for a museum heist. They must work together to explore, avoid the guard, steal valuables, and when the alarm is triggered - escape! At this point, it is everyone for themselves; after all, there is no honor among thieves. Players that successfully escape turn in all of their loot, maybe keeping some for themselves, and split the spoils. Players that don't get out in time are caught and receive no share. Can your **Crew** pull off the heist when everyone is in it for themselves?

Objective

Explore the museum as fast as possible in search of the **heist target**, a valuable historical item, and steal as much as possible while you can. With each turn the **alarm counter** increments until an alarm is triggered with an unsuccessful dice roll. At which point, players must return to the starting point before the **escape counter** returns to zero. The player with the most money after 3 rounds wins!

Components

- 1 Game Board
- 5 Player Inventory Cards
- 5 Player Tokens
- 1 Guard Token
- 1 Alarm / Escape Token (double-sided)
- 2 Dice
- 30 Item Cards
- 15 Event Cards
- 10 Hazard Cards

How To Play

Setup

1. Place the main board in the center of the table.
2. Players should choose a character and claim their respective **character token** and **character inventory card**.
3. Place the **alarm token** on turn 1 of the turn counter (on the bottom of the board).
4. Shuffle the **item cards**, **event cards**, and **hazard cards** separately.
5. Draw $(\# \text{ of players} * 3) + 2$ **item cards** to be the active items for this round. Discard the others for later rounds.
6. Have a player select one card at random and reveal it to everyone, this is the **heist target**.
7. Place the **heist target** back into the active items and take turns to place the cards, face-side down, in rooms - players must fill the left side of the board with items, before placing any in the board's eastern wings. *Take note of who placed the last item card.
8. Set the **guard token**, **2 dice** where they can be reached by all.
9. Place the **Event Cards** on the game board, these represent the **In-play Deck**.
10. Place the **player tokens** in the start square.
11. If no-one can decide who goes first, the player who placed the last item card on the board is player 0, incrementing clockwise. Roll a single die and divide the result by the total number of players. Calculate the remainder, the player with that number assigned to them goes first.

- a. ex. Three players - Player 0, Player 1, Player 2. Rolling a six-sided die results in a 4. Dividing 4 by 3 results in a remainder of 1. Player 1 goes first.

Player Turns

Each player turn consists of three parts.

1. **First Movement**
2. **Action**
3. **Second Movement**

Players will take turns in a clockwise order starting from the first player, and each player will complete all three parts of their turn before ending their turn.

Turn Breakdown

1. First Movement

- Players can move up to 2 tiles.
- If a player wishes, they can forfeit the **first movement** in order to skip straight to their **action**. They can still perform their **second movement** unless an event prevents them from doing so.

2. Action

Actions represent player's interactions within the game world. Players can *ONLY* perform 1 action per turn.

- **Pickup**
 - If the player stops in a room with an item, players can use an action to pick up the item and place it into their **character inventory**. Players can place the card face-up or face-down in the main inventory on the colored space that matches the rooms value multiplier.
 - Note* If the item is the **Heist Target**, it must be placed face up and announced to the other players.
- **Drop**
 - Players can choose to drop one or more items as an action.

- When dropped, place the items on the same tile as the player's **character token**. Any item that has been dropped is considered damage, unless placed in the **shared stash**, and will revert to a x1 multiplier regardless of player location.
- Players cannot pickup items they have dropped without completing a full movement action off of the current tile.
- **Search**
 - If a player chooses not to perform any of the other actions, they must perform a search action.
 - To search, draw a card from the **In-play Deck** and follow the instructions on the card.

3. Second Movement

- Players can move up to 2 tiles.
- If a player wishes they can forfeit this movement to remain stationary
- Completing the **second movement** will in end the player's turn.

Phases

The game is played over 3 rounds. Each round has 2 phases with each phase taking up to a maximum of 12 turns.

1. **Heist Phase**
2. **Escape Phase**

Phase Details

1. Heist Phase

When the players are breaking into the museum.

- The **in-play cards** consist of only the Event Cards.
- Players must search for the **heist target** and steal valuables from rooms.
- Players can drop items at the start tile or carry items in the **character's inventory**. Anything in the start tile, and the player's **character inventory card** (if they successfully escape), is stolen.

- After all players have finished their turn, the **alarm counter** increments. 1 player must then roll against the **alarm counter** value. If after rolling 2 dice the result is less than or equal to the **alarm counter** value, the alarm goes off.

2. Escape Phase

When the players are escaping the museum.

- When the alarm goes off, flip the **alarm counter** to show the **escape counter** and place it on the same turn value on the turn counter.
- Shuffle the **Hazard cards** into the **in-play deck**, which should now contain all event and hazard cards.
- Players have until the **escape counter** returns to 0 to return to the start tile to escape successfully.
- After all players have finished their turn, reduce the turn counter value by 1.
- Players that reach the start tile have escaped. Players that do not reach the start point by the time the turn counter reaches 0 are caught.

Round End

- When the **escape counter** reaches 1, all players that have not escaped can complete one final turn after which the round ends.
- Successfully escaped players turn in the items in their **character inventory** but may choose to keep one item for themselves without informing other players. If players failed to steal the **heist target**, the value of the shared spoils have their value halved.
- Players that are caught get nothing from the shared spoils and have all of their **character inventory** taken. They can hide 1 item from the guard to keep, in the same way that escaping players can keep 1 item without telling the others in the crew. However, they must pay their own bail. To do so, they must return 1 hidden item, either from this or an earlier round, players with no items or hidden items get nothing for that round.

Earnings

- At the end of each round, escaping players divide the spoils from the shared pot equally among themselves.
- Multiply the item value by the room multiplier that it was found in and add the total. Split this equally between all escaped players.
- Hidden items should be kept in the hidden inventory section of the **character inventory card** until the end of the game's three rounds. Use the hidden inventory section of the **character inventory card** to keep track of multipliers.
- After three rounds add together what each player received from the shared loot and add any hidden items with their multipliers.

The Players

Each character has a **special ability** that is displayed on their **character inventory card**.

- **Declan**
 - 1+ to move on their **first movement** if the player is carrying 1 item or less.
- **Max**
 - 1+ to carry capacity but moves -1 tiles in their **second movement** if they are holding 4 items.
- **Jordan**
 - *Once per round*, at the *end of the round*, on a roll of 7+ can increase an items multiplier by 1 up to the maximum of x4.
- **Holly**
 - *Once per round*, on a roll of 7+ can safely end a turn in the same area of the board as the guard without consequences.
- **Jordan**
 - *Once per round*, on a roll of 7+ can steal 1 random item from another player when moving over another player occupied tile.

The Guard

The Guard will occasionally patrol the halls of the museum with the aim of preventing

any of the museum valuables from being stolen.

- When mentioned in an **In-play Card** pulled by the player, the guard appears in the section of the museum as the respective player. Place the **Guard Token** on that section of the board. In the event the player is in a room, place the guard in the last area that the player was present.
- While the **Guard** patrols a section, any player that ends their turn in the hallway of that section is spotted by the **Guard**. Players that are spotted must drop their lowest multiplier item on their current tile and immediately move to the nearest tile not in that section. (This can be the nearest room, or the hallway of another section. In the event of a tie, the player can choose).
- Players cannot move through the hallway of the section where the **Guard** is present (with the exception of Holly when she uses her ability).
- The **Guard** will remain stationary in that section for the remainder of the round, and the entirety of the next round.
- The **Guard** can be moved if another player pulls a card to move the guard, but the 2-round timer for the guard resets each time it is moved.

End of Game

After the 3rd round, all players total their earnings. The player with the most money wins!
